

ELECTRICAL DRIVELINE

Upskilling

Online – based education for professionals

This program is aimed to offer an upskill or reskill opportunity to those who have documented experience in engineering or within similar fields. It provides knowledge about electrical vehicles and its components. The programme consists of 6 courses.

Requirements:

– Minimum 1 yr (full time) work experience from the automotive and/or manufacturing industry.

Basic understanding from electricity is preferred.

More about the programme

All lectures are delivered as live webinar/seminars during daytime. All live webinar/seminars will be recorded and uploaded on the learning platform. The program provides the students with knowledge in electrification, safety regulations, electrical machines, electrical storage system and power electronics. Courses will be taught by skilled teachers with both academic and practical experience. A certificate will be issued after successful completion of the programme.

Application and course start date

More information regarding application and course start dates can be found [here](#).

Short courses are programmes under 100 HVE credits (6 months) that aim to provide skill development for professionals.
